Professional Summary

Computer Science and Engineering (Data Science) undergraduate with strong expertise in Machine Learning, Artificial Intelligence, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), and Generative AI. Experienced in developing end-to-end AI applications. Worked as an AI and Full Stack Developer Intern at Algorithm Aliens, building and integrating LLM-powered features. Skilled in data preprocessing, model training, NLP, and passionate about solving real-world problems through intelligent, data-driven solutions.

Skills

Languages: Python, Java,R,C,SQL
AI/ML: Machine Learning, Deep Learning, NLP, LLMs, RAG, Scikit-learn
AI Frameworks & APIs: LangChain, Vector Databases (ChromaDB)
Libraries: NumPy, Pandas, Matplotlib
Databases: MySQL, MongoDB
Tools: Git, GitHub, VS Code, Jupyter Notebook
Core: Data Structures and Algorithms, DBMS, OOP

Experience

Algorithm Aliens Private Limited — AI and Full Stack Developer Intern

- Built and integrated AI/ML-powered features end-to-end, including LLM-based components.
- Developed and maintained backend services in Python, wrote clean, well-tested, documented code, and used Git for collaborative version control.

Projects

Unified Multimodal RAG Evaluation Framework (Python, LLMs, RAG, Vector Databases)

- Developed a unified multimodal RAG evaluation framework to benchmark and compare different Retrieval-Augmented Generation architectures.
- Evaluated RAG systems using metrics such as faithfulness, context relevance, answer relevance, correctness, and response latency.
- Integrated a Final Judge LLM to compare evaluation results, rank architectures, and recommend the most suitable RAG approach for each query.
- Built an interactive platform enabling real-time querying, performance comparison, and generation of reliable, source-grounded responses.

Hybrid Quantum Machine Learning for Cropland Classification (Python, Qiskit, NumPy, Pandas, Scikit-learn) 2026

- Developed a hybrid quantum-classical machine learning model using Qiskit for satellite image-based cropland classification.
- Applied feature engineering, quantum circuits, and model evaluation techniques to improve land-cover classification accuracy.
- Evaluated model performance using standard classification metrics to support agricultural monitoring and land-use analysis.
- GitHub Repository: github.com/Sahithiiii22

Achievements

- Department Topper, B.Tech Computer Science (Data Science), Vignana Bharathi Institute of Technology.
- Participated in college-level Project Expo and presented a Hybrid Quantum Machine Learning model for Cropland Classification using Qiskit and Python.

Certifications

- AWS Academy Machine Learning Foundations
- IBM Getting Started with Artificial Intelligence
- AICTE Data Science Master Virtual Internship
- Python Programming Course (Udemy)

Education

Vignana Bharathi Institute of Technology — B.Tech in Computer Science (Data Science) 2023–Present
CGPA: 9.02
